---

[In-extenso](#) is a search engine specifically designed for social sciences. It does explore "only" part of the web, and its main objective is to avoid all that "noise" and inaccuracies frequently seen when using generic search engines. The work is coordinated by the [Revues.org](#) team, which guarantees a good selection of sites and article. It contains over 130.000 articles and lists over 4.000.000 pages.
